

MONTH 1 — AI Foundations + Practical Tools

Week 1: Introduction to AI

- What is AI?
- Difference between:
 - AI vs Machine Learning vs Deep Learning
- Real-world AI examples:
 - ChatGPT
 - Google Maps
 - Face recognition
 - Recommendation systems
- AI myths & limitations
- Ethics & responsible AI

Practical

- Exploring ChatGPT, Gemini, Claude
- Comparing answers from different AI models

Week 2: Prompt Engineering (VERY IMPORTANT)

This is where most value is.

- What is a prompt?
- Types of prompts:
 - Instruction prompts
 - Role-based prompts
 - Chain-of-thought (simple explanation)
- Prompt structure:
 - Role
 - Task
 - Context
 - Output format

Practical

- Writing prompts for:
 - Emails
 - Reports
 - Lesson notes
 - Marketing content
 - Code generation
- Prompt mistakes & improvements

Week 3: AI for Productivity & Business

- AI for:
 - Content creation
 - Research
 - Data summarization
 - Customer support
 - Marketing & ads
- AI tools overview:
 - ChatGPT
 - Canva AI
 - Notion AI
 - Excel + AI
 - Google Workspace AI

Practical

- Build:
 - AI marketing plan
 - AI-generated social media calendar
 - AI-powered CV / proposal

Week 4: Intro to Data & AI Thinking

(No complex statistics)

- What is data?
- Structured vs unstructured data
- How AI learns from data (conceptually)
- Bias in data
- Simple datasets explanation

Practical

- Using AI to analyze:
 - Attendance data
 - Sales data
 - Survey data

MONTH 2 — AI Development & Automation

(Low-code + beginner-friendly coding)

Week 5: Introduction to Python for AI (Beginner)

- What is Python?
- Why Python for AI?
- Basics:
 - Variables
 - Lists
 - Dictionaries
 - Simple functions

Practical

- Simple Python scripts
- Using Python with ChatGPT help

Week 6: AI APIs (Very Practical)

- What is an API?
- How AI APIs work
- Using:
 - OpenAI API
 - Claude API (conceptual)

- Costs & limitations

Practical

- Build:
 - Simple AI chatbot
 - AI text summarizer
- Using environment variables securely

Week 7: Building AI Chatbots

- Chatbot logic
- Context & memory
- Prompt templates
- Simple moderation & safety

Practical

- Build:
 - School assistant chatbot
 - Customer support chatbot
 - FAQ AI bot

Week 8: AI Automation (Low-Code)

- What is automation?
- AI + automation tools:
 - Zapier
 - Make.com
 - Google Forms + AI
- AI workflows

Practical

- Automate:
 - Form → AI → Email
 - Customer inquiries → AI replies
 - Reports generation

MONTH 3 — Real Projects + AI in the Real World

(This is where students gain confidence)

Week 9: AI Use Cases by Industry

- AI in:
 - Education
 - Healthcare
 - Business
 - NGOs
 - Finance
- Local African use cases

Practical

- Students choose **one industry**
- Define a real AI problem to solve

Week 10: AI Project Development

- Planning an AI solution
- Choosing the right tools
- Data input & outputs
- UI basics (simple web or form)

Practical

- Build a **mini AI system**, e.g.:
 - Attendance analyzer
 - Student performance assistant
 - Business analytics chatbot
 - HR screening assistant

Week 11: AI Ethics, Security & Future

- AI risks
- Data privacy
- AI hallucinations
- Regulations (high level)
- Future of AI & jobs

Practical

- Evaluating AI answers
- Bias testing
- Ethical scenarios discussion

Week 12: Final Project & Presentation

- Students present:
 - Problem
 - AI solution
 - Demo
- Feedback & improvement
- Certification & next steps
